Four-wing door, two of which are central and sliding outwards
To totally open the door, it is necessary to activate the side wings mechanism and switch from sliding to hinge outwards opening and slide the rights sliding wing rightwards and the left sliding wing leftwards.
The two central wings must make a double movement, sliding sideways first, then rotating and folding on the external wings.
The doors are subject to quality control tests to comply with ISO 12216.2023 standards.
The sliding doors opening direction is always considered from the outside of the boat.
