

GARAGE DOORS

Among all boating accessories available in our catalogue, garage doors are in high demand. All movement mechanisms inside the boat must be perfectly designed so that all requirements on board are satisfied. Our priority is to allow boat owners to cruise safely and with all comforts.

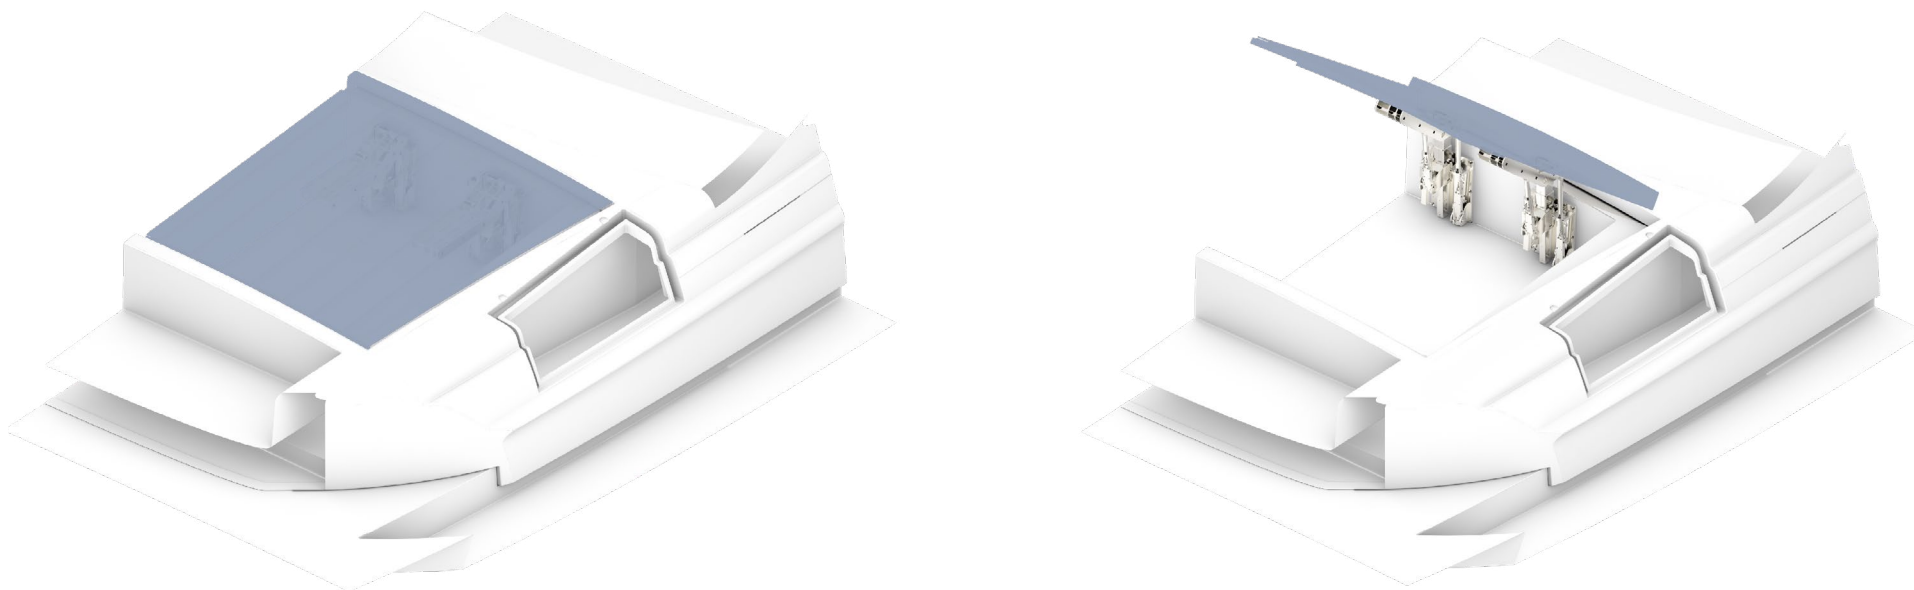

Garage door opening systems for yachts assure, as a result, high aesthetic impact and intuitive functionality to all our customers: thanks to the attention given to all processing steps, management takes place in full autonomy, even when significant volumes are involved.

GARAGE DOORS

Garage door opening systems are available in many technical versions according to the application and can satisfy all client requirements.

Movement can be obtained by means of linear hydraulic actuators rather than rotating, if opening angles are critical, or even in a fully electric version.

Control technology can be totally hydraulic or use advanced electronic position control that can be applied both to hydraulic and electric solutions.
