

# ALUMINIUM TELESCOPIC GANGWAY

## 3773 Dolphin

This gangway allows the boarding of 120 Kg/270 lbs maximum (one person at a time).

### IDEAL FOR TENDER LIFTING

X= maximum length of gangway when extended

K= the minimum distance to be maintained between the centre of rotation of the gangway and the centre of rotation of the ram (K).

$\alpha$  and  $\beta$  = the total angle the gangway can achieve.

The drawings have been studied considering a vertical transom. Variations of the transom angle and the different heights of dimension K will produce different values of angle  $\alpha$  and  $\beta$ .
